## **ACKNOWLEDGEMENT**

Under CRIE (Center for Research, Innovation and Entrepreneurship) we both worked under the guidance of mentors of CRIE, who guided us through a way leading to professionalism and practical hands-on work experience. It is indeed with a great pleasure and immense sense of gratitude that we acknowledge the help of these individuals. We are highly indebted to our

Director Ankur Gupta, “MODEL INSTITUTE OF ENGINEERING AND TECHNOLOGY”, for the facilities provided to accomplish this main project. We would like to thank our Prof. Ashok Kumar, Head of the Department of Computer Science and Engineering, MIET. For this constructive criticism throughout our project. We feel elated in manifesting our sense of gratitude to our internal project guide. Asst. Saurabh Sharma, Department of Computer Science and Engineering, MIET. He has been a constant source of inspiration for us and we are very deeply thankful to him.

## **FACULTY AND MEMBERS**

Dr. Ankur Gupta - He is the Director at the Model Institute of Engineering and Technology, Jammu, India, besides being a Professor in the Department of Computer Science and Engineering. Prior to joining academia, he worked as Technical Team Lead at Hewlett Packard, developing software in the network management and e-Commerce domains. He has 2 patents to his name and 20 patents pending. He obtained his B.E, Hons. He is a senior member of the ACM, senior member IEEE and a life-member of the Computer Society of India. He has received competitive grants over Rs. 2 crores from various funding agencies and faculty awards from IBM and EMC.

Prof. Ashok Kumar - He has over 21 years of experience in industry, academics, research and academic administration. He did his Doctorate from IKG Punjab Technical University, Jalandhar, Master of Engineering from Punjab Engineering College, Chandigarh and Bachelor's degree from NIT, Calicut, Kerala. He is Fellow of Institution of Electronics and Telecommunication Engineers (IETE). His research interest areas are Optical Networks, Electronics Product Design, Wireless Sensor Networks and Digital Signal Processing. He is reviewer of many reputed national and international journals. He has also coordinated many national and international conferences.

Mr. Saurabh Sharma - He is working as Assistant Professor in the Department of Computer Science at Model Institute of Engineering and Technology, Jammu and has over 10 years of experience in academics and research. He has done his M. Tech CSE in Web Mining from Maharishi Markandeshwar University, Mullana, Ambala (HR) in the year 2011. His research interest areas are Web Mining, Data Mining, Machine Learning, ANN, Pattern Classification and Object Identification. He has, to his credit, 25 research papers published in journals of national and international repute and he has guided 11 M. Tech Dissertations.

## **Abstract**

Online test platform is a BASH shell-based tool where tests are conducted online through the internet using a computer system. The main goal of this online examination system is to effectively evaluate the student thoroughly through a totally automated system that not only reduces the required time but also obtains fast and accurate results.

It is a good source of interactivities among the students and between the teacher and students. It is done to improve student's comprehension levels and learning motivation. As one of their tools, online test tools are quite effective. However, in order to use the online test tool, a teacher generally requires a great deal of labour.

For example, a teacher needs to create quizzes and input them in the online test tool.

To solve these problems, we have developed a Bash shell based Online Test Platform which can create quizzes competitively and collaboratively by students for the purpose of reducing the load required for a teacher and promoting interactions among students and between the teacher and students.

Keywords: Bash, Shell Scripting, Index Page, Sign-In, Sign-Up, Pattern Matching, File Handling

## **1. Introduction**

Command line test is a BASH shell-based tool that simulates login based online testing scenarios. Initially the user will be provided with a sign-in option where predefined users will be allowed to log in. Upon successful login, this tool will display questions on the screen for the user from the existing database. It will also handle error conditions like time-out. This tool will also store answers provided by users for future verification.

There are a lot of online test platforms which enable students to take tests online. They will typically have a user-interface, backend question bank and evaluation part. They will also support other features like predefined time per question, output reports etc. The idea of this project is to simulate such an online test interface using Linux Shell Scripting and commands.

By implementing this Linux Shell Scripting Project, we will apply Shell programming constructs (ex: loops), Pattern matching commands (ex: grep, sed, etc...) and File handling (ex: permission, directories etc...) aspects during implementation.

We start implementing this Linux Shell Scripting Project by first making an Index Page.

## **2. Objective**

Goal of this project is to simulate login based online testing scenario. Initially the user will be provided with a sign-in option where pre-defined users will be allowed to login. Upon successful login this tool will display questions for the user from existing database. It will also handle error conditions like time-out. This tool will also store answers provided by users for future verification.

### 3. Terminology

#### Index Page

In this, three options will be displayed on the user's screen:

1. Sign-In
2. Sign-Up
3. Exit

Then a pop-up message will be displayed on the user's screen to take the input from the user, and from the input given by the user, the program will proceed accordingly.

For instance, if the user enters the input as '1', then he'll be redirected to the Sign-In Page where the user will be given options to log into the page and further can take the test.

If the user enters the input as '2', then he'll be redirected to the Sign-Up page where the user will be asked some details for Sign-up.

And if the user enters the input as '3', then the program will be terminated.

#### Sign-In Page

In the sign-in page the user will be asked to enter the email id and password. The email id and password provided by the user are matched with the details of the users present in the user\_database.csv. If the details do not match then the message is printed with an incorrect sign in details. If the email id provided by the user is matched with the details present in the user\_database.csv. Then the details will be validated. And the user will be redirected to the profile page.

### Sign-Up Page

In the sign-up page the user will be asked to enter the Name, E-mail ID, Contact number, Date of Birth and place of birth. All the above details will be stored in different variables. The password should be 8- alphanumeric characters, the email-id should be with “@.”, the mobile number should be of 10 digits and the date of birth of the user should be in (dd/mm/yyyy) format. If any of the above conditions are not met then an error message will be displayed on the screen.

### Profile Page

In this, five message will be displayed on the user's screen to take the input from the user:

1. Name
2. E-mail
3. Mobile no.
- 4.DOB
- 5.Place

All the above details of the users will be printed. Then a pop-up message will be displayed on the user's screen to take the input from the user. For instance:

- 1.ENTER[T] TO TAKE THE TEST
- 2.ENTER[E] TO EDIT PROFILE
- 3.ENTER[L] TO LOGOUT

If the user enters the input “T” then he will be redirected to take test, If the user enters the input “E” then he will be redirected to edit profile page, If the user enters the input “L” then will be redirected to logout, If the user enters any other input, then will be redirected to profile page.

### Edit Page

The user will be able to edit the details present in the user\_database.csv.

### Test Screen

In the test screen, some instructions will be displayed on the user's screen before starting the test. After this, the user will be asked whether he wants to proceed further to take the test or not. If the input enters “Y” as the input, then the user will be redirected to the test screen to take the test. And if the user enters “N” as the input then the user will be redirected to the profile page.

If the user enters anything else other than yes or no, then a pop-up will appear on the user's screen with a message “Invalid Input”.

### Test Result

1. In this, “RESULT” and “TOTAL SCORE” messages will be displayed on the user's screen.
2. Then a pop-up message will be displayed on the user's screen to take the input from the user,

For instance, if the user enters the input:

1. ENTER[Y] to retake the test
2. ENTER[P] to go to profile page
3. ENTER[V] to view the test

3.If the user enters the input “Y” then he will be redirected to retake test, If the user enters the input “p” then will be redirected to profile page, If the user enters the input “V” then will be redirected to view the test, If the user enters any other input, then “INVALID OPTION” will be displayed.

### View Test

In view test, the user will be able to evaluate the test. The question as well as the option selected by the user will be displayed on the screen along with the correct answer. By

viewing the test, the user will be able to evaluate his marks as well as the topics in which the user is lacking.

### Test Questions

In this online test platform, the user will be given 10 questions. Each question has a time limit of 30 seconds. If the user failed to attempt the question in the given time, then he will be directly transferred to another question and the user won't be able to attempt that question that the user missed. And the above 10 questions will be randomly picked from a set of 20 questions provided in the question bank.

## 4.Algorithm

The student Will be provided 3 options: -

1. Sign-In
2. Sign-Up
3. Exit

The input given by the user will be stored as argument named "input\_user\_index"

If "\$input\_user\_index == 1", then the user will be directed to the sign\_in\_page.sh

The user will be asked to enter the email-id and password. These details will be stored in argument "sign\_in\_email" and "sign\_in\_password".

If "\${email\_id\_field[i]} == \$sign\_in\_email \${password\_field[i]} == \$sign\_in\_password" then user will be directed to profile\_page.sh.

And the username, email-id, mobile number, date of birth and birth place are printed on the screen. And the user will be given 3 options:-

[T] Take test

[E] Edit Profile details

[L] Log out

The input from the user will be saved as argument "user\_input".

If "user\_input == T" then the user will be directed to test\_screen.sh

The user will be provided with 2 choices(Y/N).

If the "user\_input == Y" then the user will be directed to test.sh

The user will be provided with 3 options: -

[Y] Retake the test

[N] Profile Page

[V] View test

The above input will be stored as argument "user\_input"

If "user\_input==Y" then the user will be directed to test.sh

If "user\_input==N" then the user will be directed to profile\_page.sh

If "user\_input==V" then the user will be directed to view\_test

The questions,with correct answer and the answer given by the user will be displayed

If "user\_input==" then the user will be directed to test\_result

If the "user\_input == N" then the user will be directed to profile\_page.sh

If the "user\_input == \*" then the user will be directed to text\_screen.sh

If "user\_input == E" then the user will be directed to edit\_page.sh

If "user\_input == L" then the user will be directed to index\_page.sh

If "user\_input ==\*" then "INVALID INPUT" will be printed, and the user will be directed to profile\_page.sh

If any of the two detail provided by the user doesn't match the details present in the "user\_database.csv".Then the a text message will be printed "Oops!! Incorrect Sign-In Details" and the user will be directed back to index\_page.sh.

Else the user didn't give any input then the text will be printed "Enter input to login"

If "\$input\_user\_index == 2", then the user will be directed to sign\_up\_page.sh

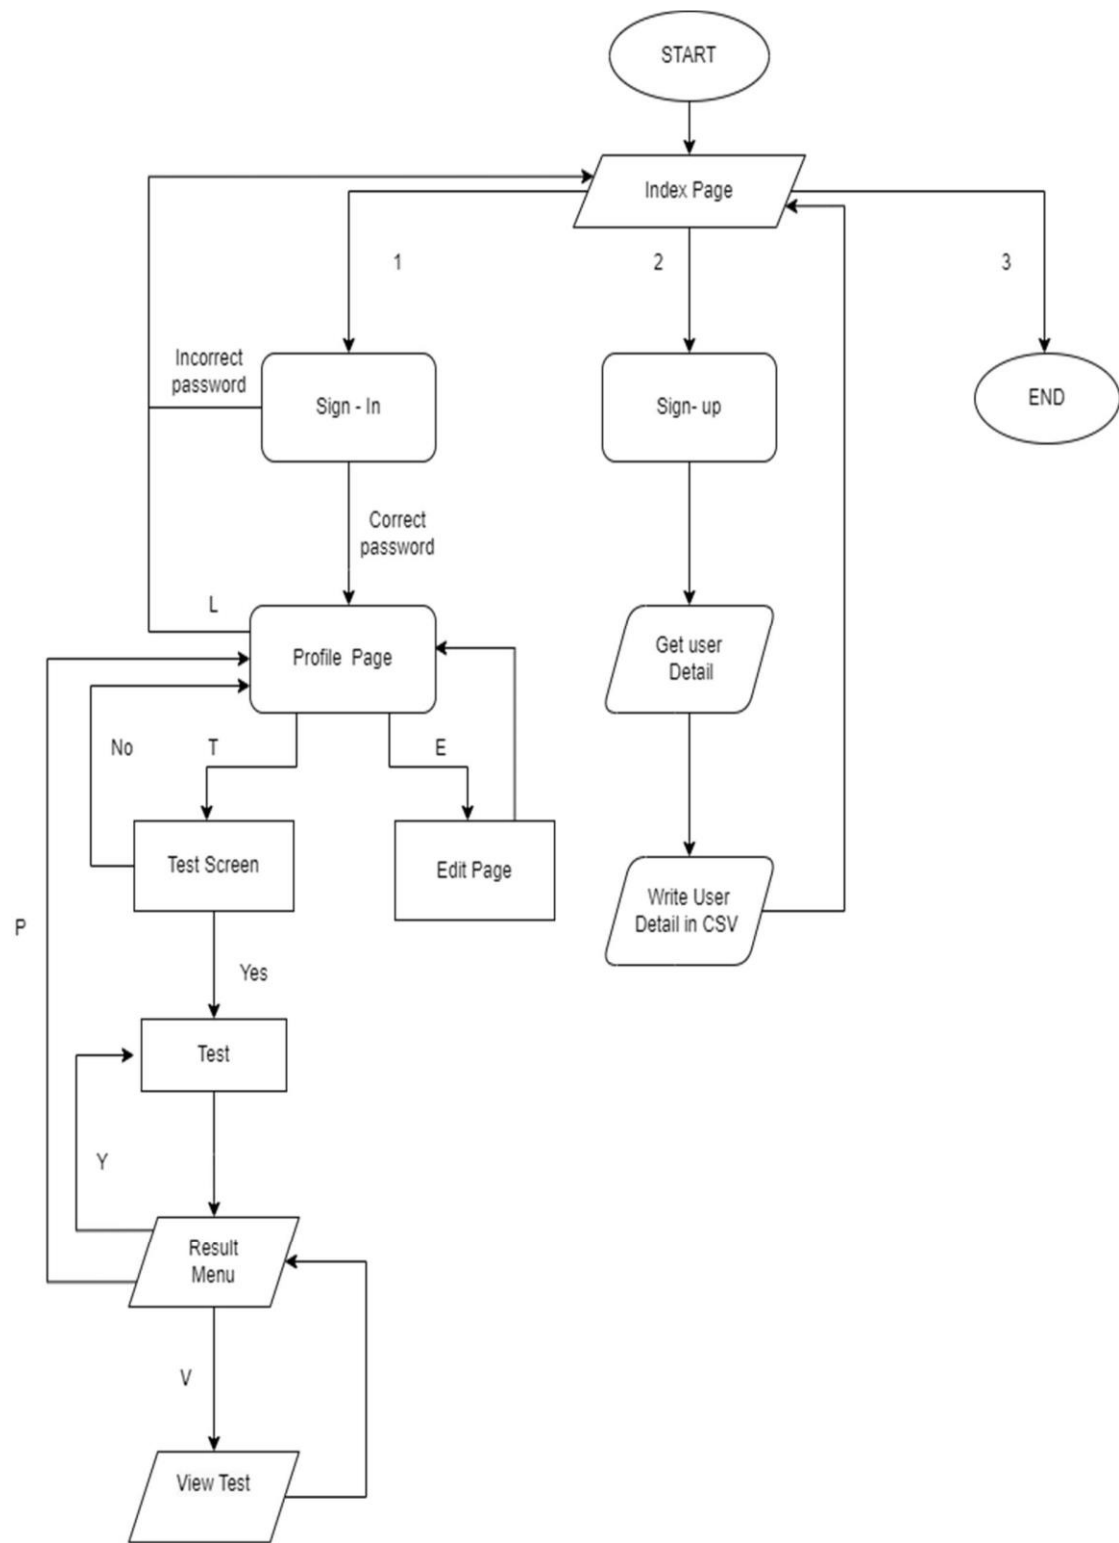

\*The user will be asked to enter Name,Password,E-mail id, Contact number, Date of Birth and Birth place. All these will be stored in argument "user\_name\_from\_user","user\_password","email\_id","mobile\_no","DOB" and "place"respectively.

If "\$input\_user\_index == 3", the the program will be closed.

If "\$input\_user\_index == \*", then invalid option will be printed, and the user will be directed to the index\_page.sh.

Else the user didn't give any input then the text will be printed telling the user to give an input.

## b. Output

i. Index Page

```
Terminal
Test Your Knowledge

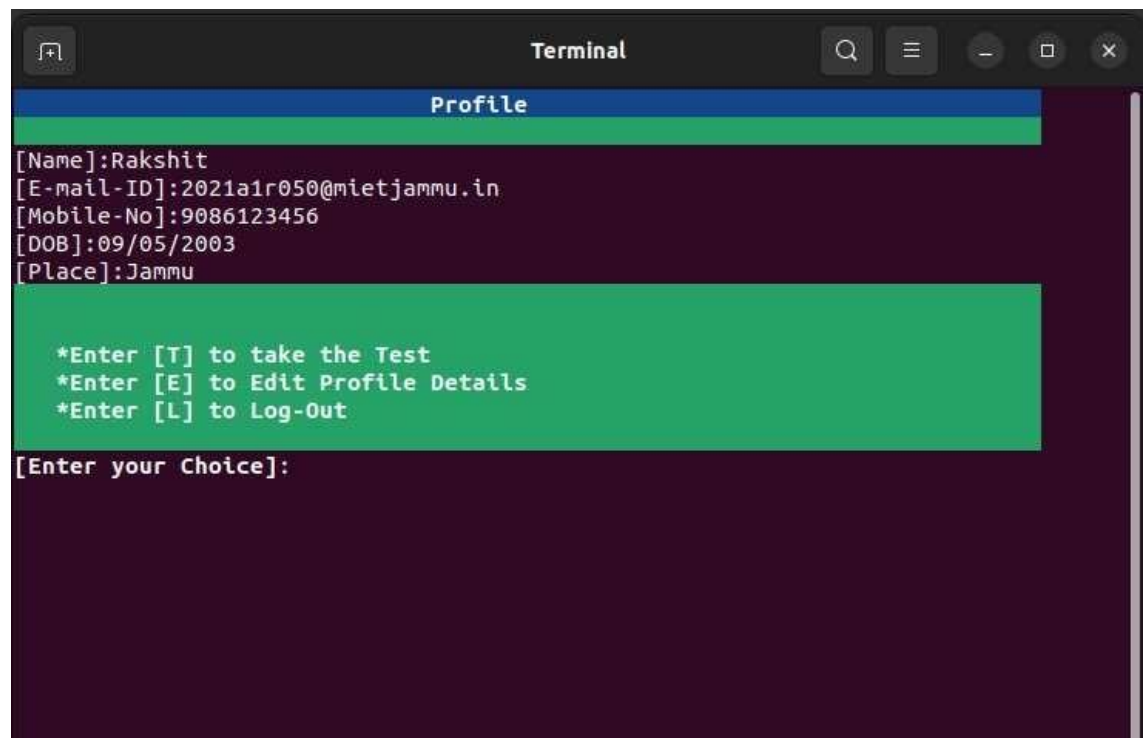

1.Sign-In
2.Sign-Up
3.Exit

[Enter your Choice]:
```

A terminal window titled "Terminal" with a dark background. It features a blue header bar with the text "Test Your Knowledge" and a green bar below it. The main content area is dark purple and displays a menu with three options: "1.Sign-In", "2.Sign-Up", and "3.Exit". Below the menu is another green bar, and at the bottom, the prompt "[Enter your Choice]:" is shown with a white cursor.

ii.

Profile Page

```
Terminal
Profile

[Name]:Rakshit
[E-mail-ID]:2021a1r050@mietjammu.in
[Mobile-No]:9086123456
[DOB]:09/05/2003
[Place]:Jammu

*Enter [T] to take the Test
*Enter [E] to Edit Profile Details
*Enter [L] to Log-Out

[Enter your Choice]:
```

A terminal window titled "Terminal" with a dark background. It features a blue header bar with the text "Profile" and a green bar below it. The main content area is dark purple and displays a form with the following fields: "[Name]:Rakshit", "[E-mail-ID]:2021a1r050@mietjammu.in", "[Mobile-No]:9086123456", "[DOB]:09/05/2003", and "[Place]:Jammu". Below the form is another green bar, and at the bottom, the prompt "[Enter your Choice]:" is shown with a white cursor.

iii. Sign In Page

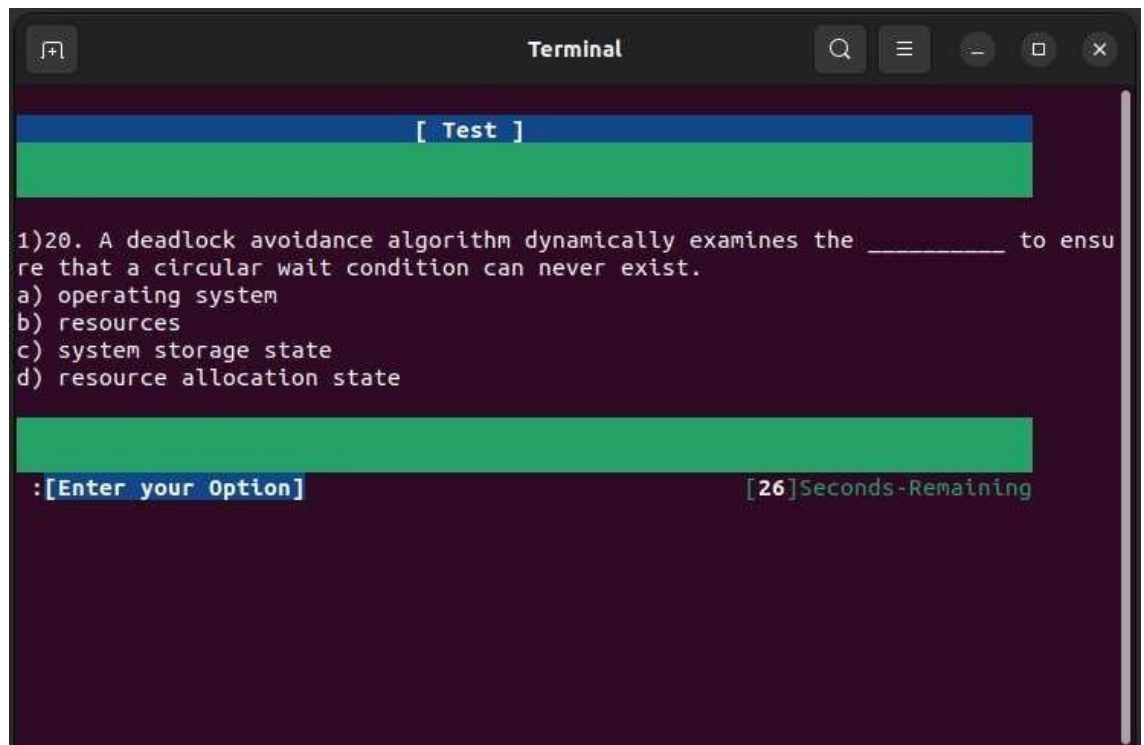

iv. Sign Up Page

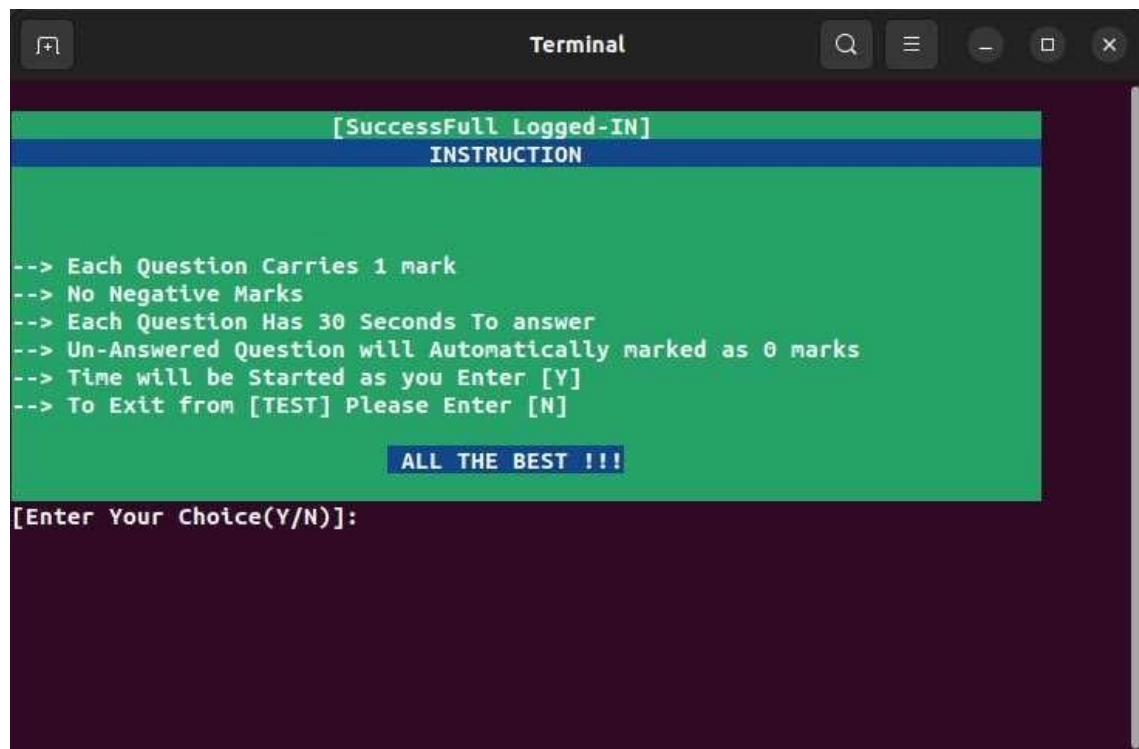

v.

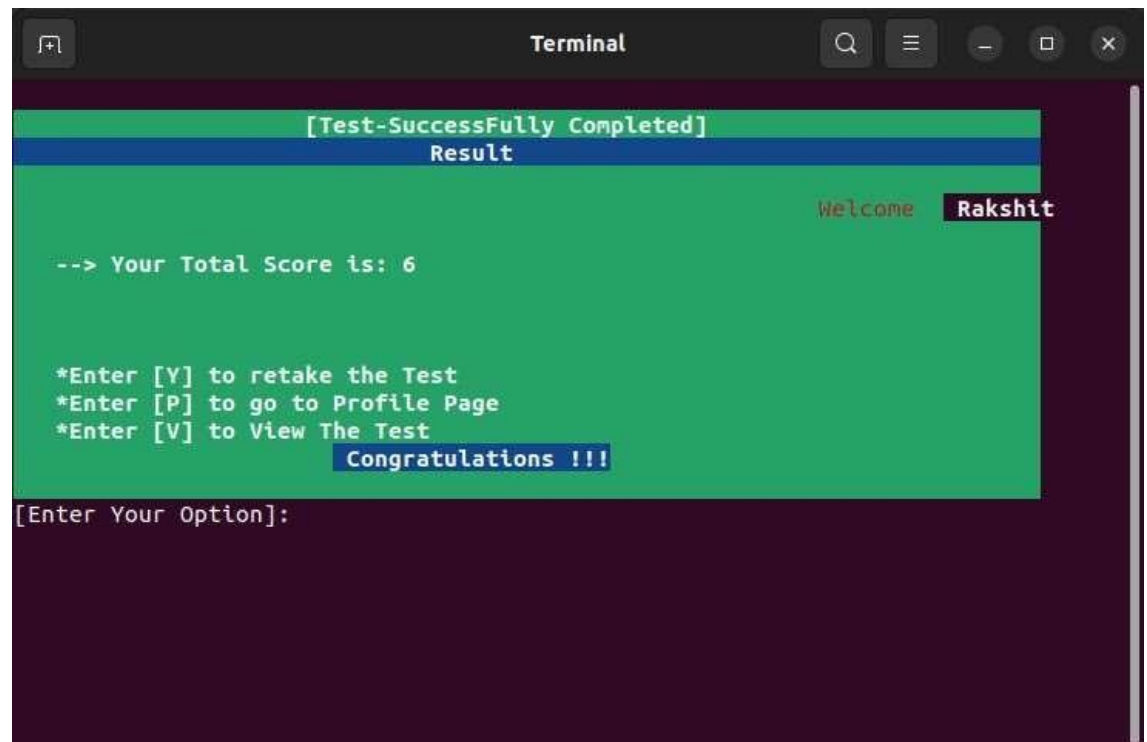

vi.

Test Screen

vii. Result Page

A terminal window titled "Terminal" with a dark background. It displays a green banner at the top with the text "[Test-SuccessFully Completed]". Below this is a blue banner with the word "Result". The main area has a green background with the text "Welcome Rakshit" in red and black. It then shows "--> Your Total Score is: 6". Below that are three instructions: "\*Enter [Y] to retake the Test", "\*Enter [P] to go to Profile Page", and "\*Enter [V] to View The Test". A blue banner with "Congratulations !!!" is shown. At the bottom, it says "[Enter Your Option]:".

```
[Test-SuccessFully Completed]
Result

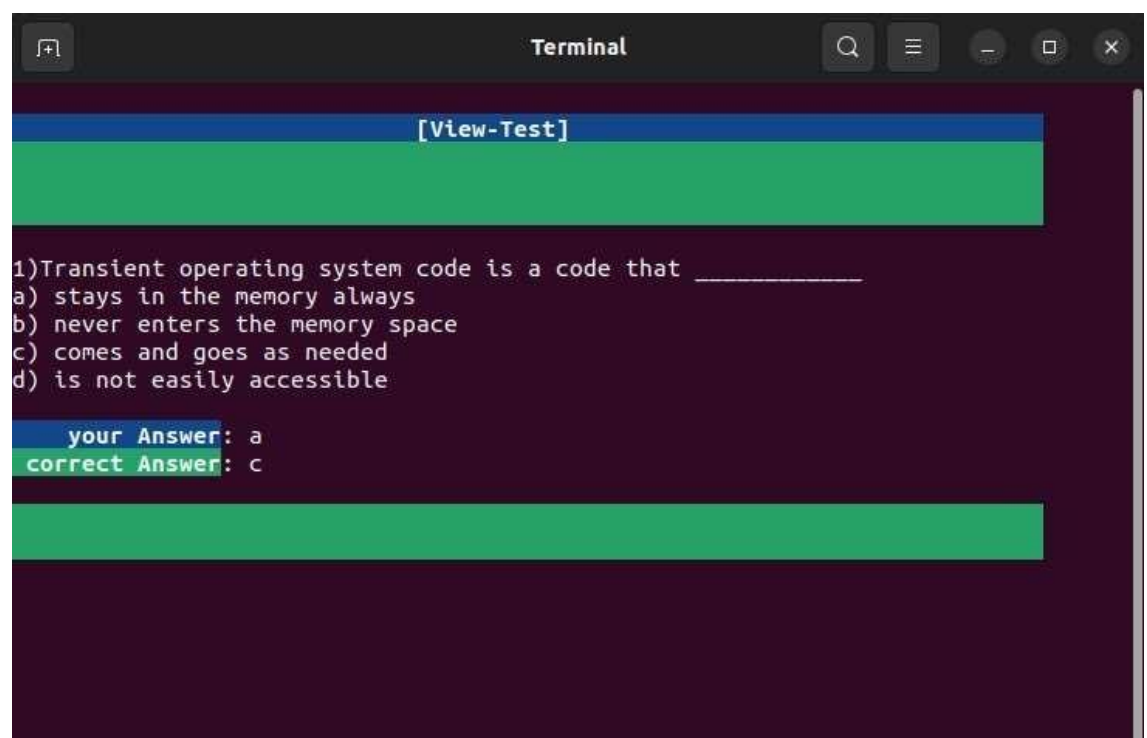

Welcome Rakshit

--> Your Total Score is: 6

*Enter [Y] to retake the Test
*Enter [P] to go to Profile Page
*Enter [V] to View The Test
Congratulations !!!

[Enter Your Option]:
```

viii. View Test

A terminal window titled "Terminal" with a dark background. It displays a blue banner at the top with the text "[View-Test]". Below this is a green banner. The main area has a dark background with the text "1)Transient operating system code is a code that \_\_\_\_\_". Below this are four options: "a) stays in the memory always", "b) never enters the memory space", "c) comes and goes as needed", and "d) is not easily accessible". Below the options, it shows "your Answer: a" and "correct Answer: c". At the bottom, there is a green banner.

```
[View-Test]

1)Transient operating system code is a code that _____
a) stays in the memory always
b) never enters the memory space
c) comes and goes as needed
d) is not easily accessible

your Answer: a
correct Answer: c
```
